

SuccessRate

Privacy & Security Whitepaper

Private Financial Planning — By Design

*Your data stays with you. Always.
No servers. No tracking. No data collection.*

Version 1.0 — March 2026

Executive Summary

SuccessRate ensures your financial data never leaves your device. There are no servers, no cloud infrastructure, and no data collection mechanisms. All computation and storage occur locally, eliminating entire categories of privacy risk.

This commitment applies uniformly across every supported platform — Windows, iOS, Mac, and web. Regardless of how you access SuccessRate, the same privacy-first architecture protects your data.

Cross-Platform Privacy Commitment

SuccessRate is available on Windows, iOS, and the web, with Mac support planned. Every version shares the same local-first architecture and adheres to identical privacy standards. No platform receives weaker protections or different data-handling policies.

Platform	Architecture	Data Location
Windows	Native desktop app	Local device storage
iOS	Native mobile app	On-device sandbox
Web	Client-side browser app	Browser-local storage
Mac	Native desktop app (planned)	Local device storage

The web version performs all financial calculations client-side in your browser. No financial data is transmitted to any server — the hosting infrastructure delivers only the application code itself.

Privacy-First Architecture

SuccessRate is built as a local-first system. All user data is stored and processed on-device.

- No cloud storage
- No external APIs
- No background data transfer
- No third-party services

Data Ownership

You retain full ownership and control of your data.

- No external accounts
- No developer access
- No recovery mechanisms
- No external storage

Encryption & Security

All data is encrypted using industry-standard practices.

- Full database encryption via SQLCipher
- Encryption key derived from your password
- No external key storage

Authentication

Authentication occurs entirely on-device.

- Password never transmitted
- No cloud identity providers
- Local-only validation

Biometric Protection

Biometric authentication enhances both security and usability.

- Face ID / Touch ID support
- Managed by operating system
- No biometric data accessible to the app

Offline Operation

SuccessRate operates fully offline.

- No internet required
- No network calls
- No remote dependencies

No Tracking or Data Collection

SuccessRate intentionally avoids all tracking mechanisms.

- No analytics
- No ads
- No behavioral tracking
- No data sharing

Diagnostics

Diagnostic logs are privacy-safe.

- Stored locally only
- No personal data included
- Optional sharing with scrubbing

Data Storage & Backup

Data exists only on your device.

- No cloud backups
- No automatic sync
- User responsible for device security

Platform Security

Relies on built-in OS protections.

- Device-level encryption

- App sandboxing
- Secure authentication systems

Shared Security Model

Security is a partnership between SuccessRate and you. The app handles encryption, data isolation, and secure authentication. You play an equally important role by keeping your device and credentials secure.

SuccessRate Provides	You Can Help By
Full database encryption (SQLCipher)	Choosing a strong, unique password
On-device-only data storage	Keeping your device physically secure
Zero network transmission of data	Enabling biometric protection
App sandboxing and isolation	Keeping your OS and apps up to date

What Happens If...

Because SuccessRate stores everything locally, there are a few scenarios worth understanding.

What if I forget my password?

Your encryption key is derived from your password. Without it, your data cannot be decrypted. SuccessRate has no server-side password reset or recovery mechanism — this is a deliberate privacy choice. We recommend storing your password in a trusted password manager.

What if I lose my device?

Your data is protected by full database encryption and, if enabled, biometric authentication. An attacker cannot read your financial data without your password. However, since there are no cloud backups, the data on that device is not recoverable from SuccessRate.

What if I uninstall the app?

Uninstalling removes all app data from your device. There is no cloud copy to restore from. If you plan to reinstall later, consider exporting your data first using the app's export feature.

What if I switch platforms?

SuccessRate supports data export so you can move your information between platforms. The data never passes through an external server during this process — you transfer the exported file directly between your devices.

Our Promise

Your data stays with you. Always.
No servers. No tracking. No data collection.
On every platform, without exception.
